

Harness Philosophy and Human Authority

What turns capable model output into a trustworthy engineering review?

Condensed Young Engineer Training Series • 55 minutes

01

EVIDENCE
CONTRACTS
STATE
HUMAN AUTHORITY

By the end, learners can do three observable things

01 Distinguish model, agent, workflow, and harness

02 Separate evidence, assessment, recommendation, and decision

03 Locate the human authority boundary

RUN OF SHOW

One system, four distinct ideas

A trustworthy result is a chain—not a clever paragraph

At every handoff: preserve identity, provenance, coverage, confidence, and consumer intent.

See the control in action

LIVE WALKTHROUGH

Compare an unconstrained review response with the same review executed through harness controls.

1

Expose unsupported claims

2

Add evidence and scope

3

Restore human authority

Suggested timing: 2 min setup • 7 min walkthrough • 3 min questions

Turn the contract into executable prompt behavior

Convert “Review this code” into a bounded, evidence-aware instruction.

01

Identity

02

Evidence

03

Scope

04

Consumer

05

Output

06

Authority

Name the controls that make the review reproducible—and the decision that must remain human.

Answer with evidence. Name the contract, state, or authority boundary you used.
