

Agent Catalog and State Machines

Who owns the question, and what must be true before work advances?

Condensed Young Engineer Training Series • 55 minutes

03

**EVIDENCE
CONTRACTS
STATE
HUMAN AUTHORITY**

By the end, learners can do three observable things

01 **Route work to the narrowest authoritative agent**

02 **Read canonical identity, layer, version, and status**

03 **Model states, events, guards, and failure paths**

RUN OF SHOW

One system, four distinct ideas

A trustworthy result is a chain—not a clever paragraph

Failure branches: `incomplete_input` • `failed` • `superseded`

See the control in action

LIVE WALKTHROUGH

Route a release question to the catalog, then walk its execution through guarded states.

1

Find the owner

2

Evaluate readiness

3

Log the transition

Suggested timing: 2 min setup • 7 min walkthrough • 3 min questions

Turn the contract into executable prompt behavior

Specify identity, boundaries, and safe incomplete-input behavior.

01

Designation

02

Question

03

Exclusions

04

Ready guard

05

Failure state

06

Next action

Route one question and explain both its agent boundary and its next legal state transition.

Answer with evidence. Name the contract, state, or authority boundary you used.
