

Orchestration and Contract-Driven Prompts

How do many agents coordinate without hiding causality or inventing findings?

04

**EVIDENCE
CONTRACTS
STATE
HUMAN AUTHORITY**

By the end, learners can do three observable things

01 **Separate scheduler, fan-out, fan-in, and gate duties**

02 **Identify safe parallelism and join guards**

03 **Project contract obligations into prompt clauses**

RUN OF SHOW

One system, four distinct ideas

A trustworthy result is a chain—not a clever paragraph

At every handoff: preserve identity, provenance, coverage, confidence, and consumer intent.

See the control in action

LIVE WALKTHROUGH

Walk a release review through parallel dispatch, artifact validation, and a human decision gate.

1

Mark dependencies

2

Define join guard

3

Place decision point

Suggested timing: 2 min setup • 7 min walkthrough • 3 min questions

Turn the contract into executable prompt behavior

Write orchestration behavior that schedules and validates but never performs domain review.

01

Select

02

Dispatch

03

Track

04

Validate

05

Route

06

Never assess

Explain the join guard and identify what the orchestrator is prohibited from concluding.

Answer with evidence. Name the contract, state, or authority boundary you used.
