

Why a Harness Exists

Why is a strong model still not a trustworthy review system?

01

**EVIDENCE
CONTRACTS
STATE
HUMAN AUTHORITY**

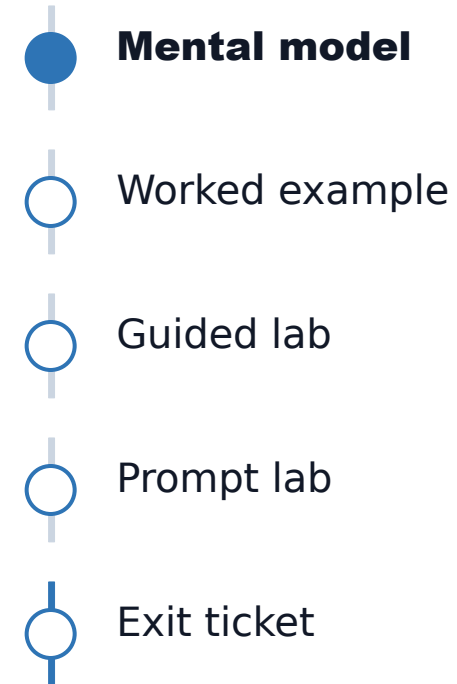

By the end, learners can do three observable things

01 Distinguish model, agent, workflow, and harness

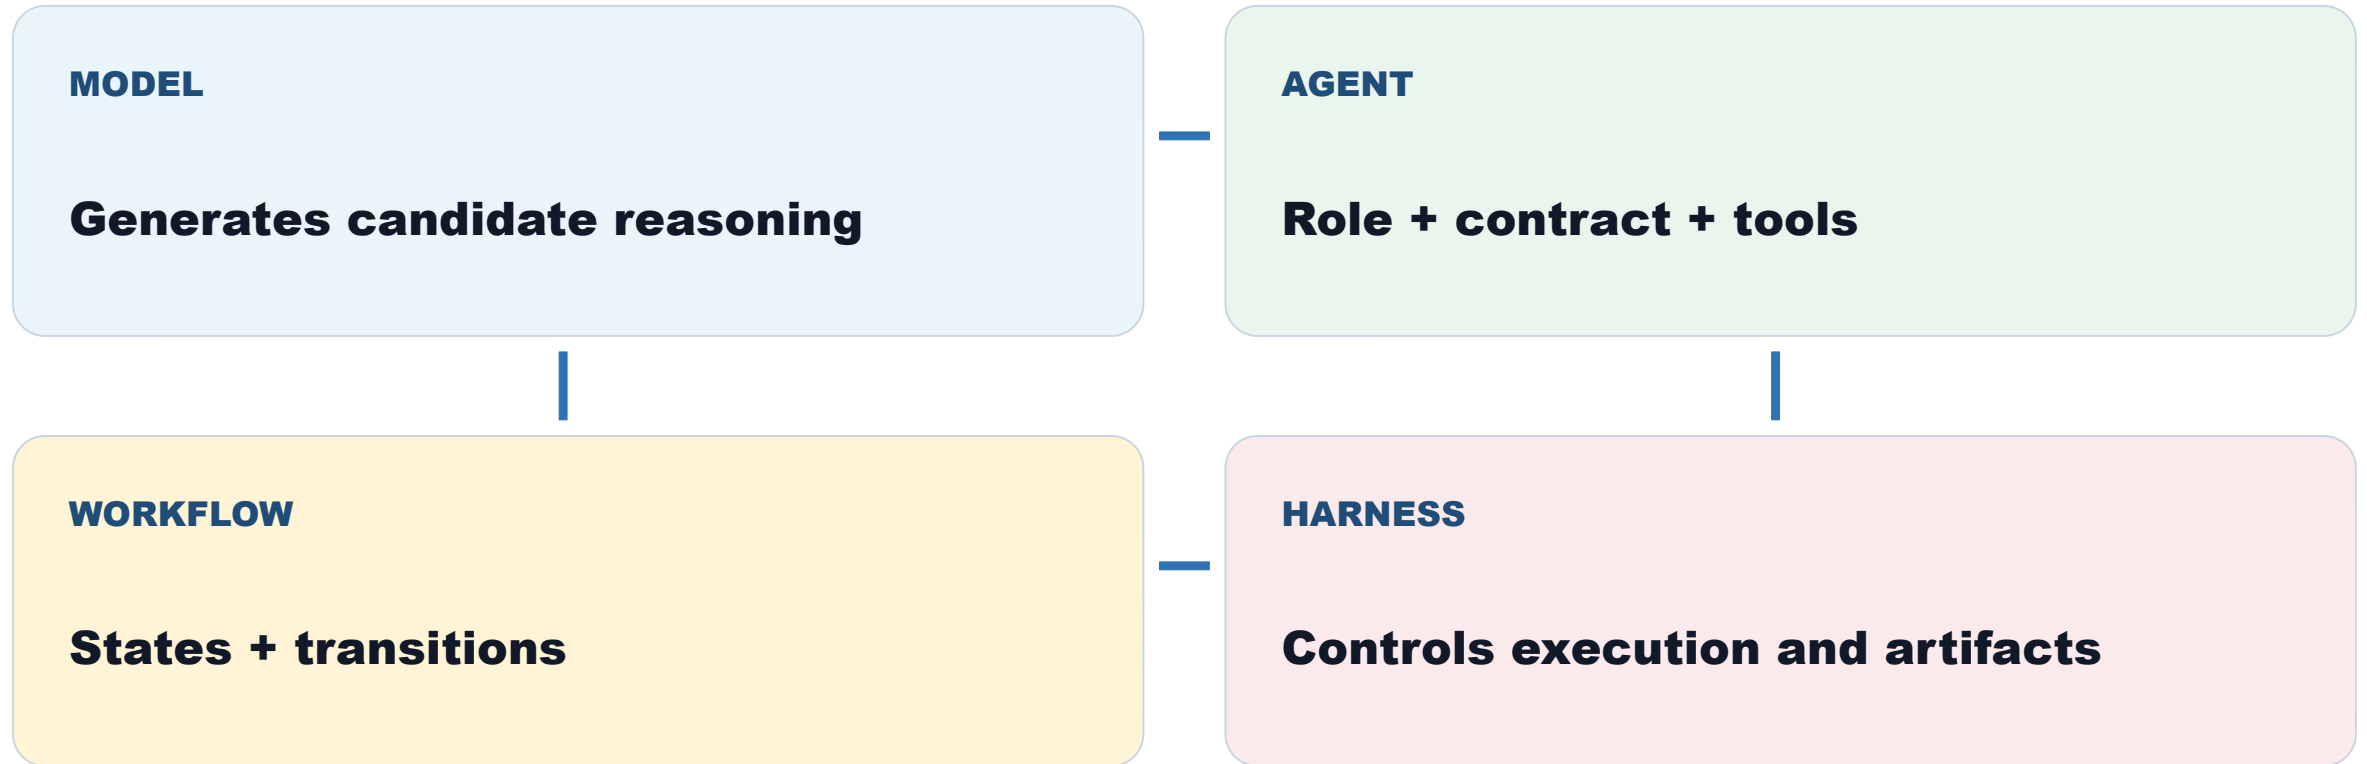

02 Name the harness controls that create trust

03 Trace a review from evidence to human decision

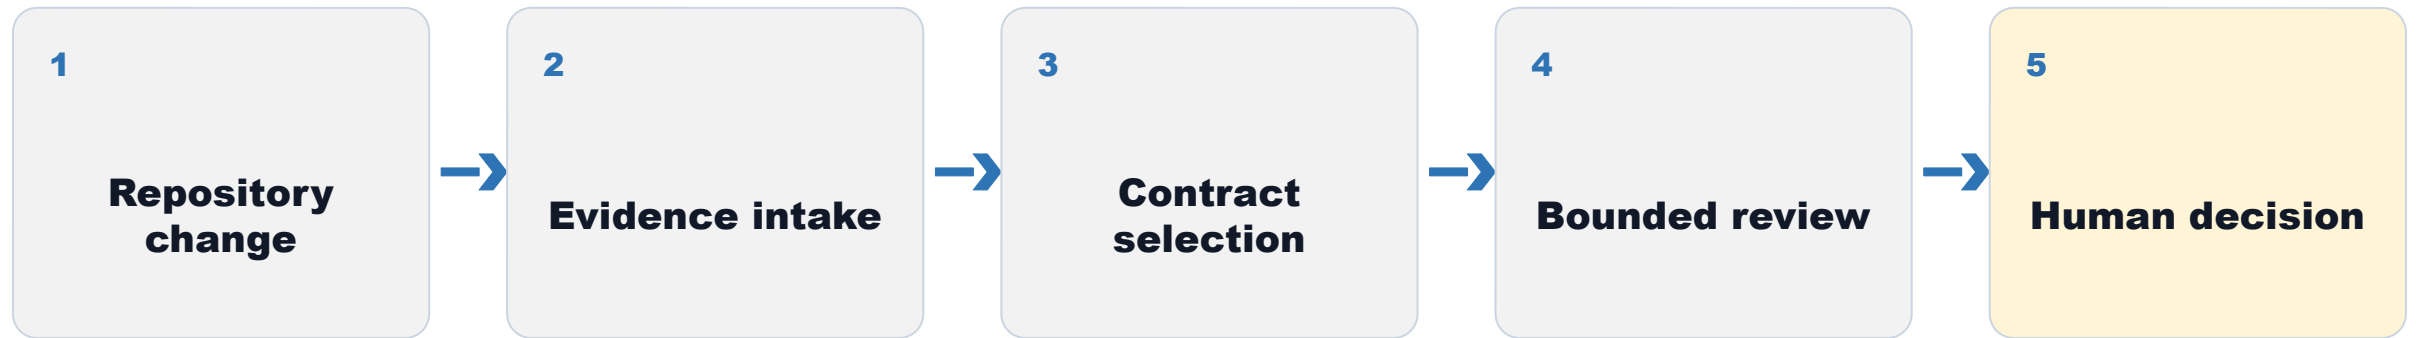

RUN OF SHOW

One system, four distinct ideas

A trustworthy result is a chain—not a clever paragraph

At every handoff: preserve identity, provenance, coverage, confidence, and consumer intent.

Build an artifact the room can inspect

TEAM TASK

Mark every control point in an unconstrained code review.

1

Find failure surfaces

2

Add harness controls

3

Defend each control

Suggested timing: 5 min brief • 20 min work • 10 min critique • 5 min repair

Turn the contract into executable prompt behavior

Rewrite “Review this code” as a bounded, evidence-aware request.

01

Evidence

02

Scope

03

Consumer

04

Output

05

Authority

06

Failure behavior

Name four things the harness must control that a model cannot guarantee by itself.

Answer with evidence. Name the contract, state, or authority boundary you used.
