

Orchestration: Fan-Out, Fan-In, and Gates

How do we coordinate many agents without hiding causality?

07

**EVIDENCE
CONTRACTS
STATE
HUMAN AUTHORITY**

By the end, learners can do three observable things

01 **Separate scheduler, fan-out, fan-in, and gate duties**

02 **Identify safe parallelism**

03 **Keep orchestrators from becoming reviewers**

RUN OF SHOW

One system, four distinct ideas

A trustworthy result is a chain—not a clever paragraph

At every handoff: preserve identity, provenance, coverage, confidence, and consumer intent.

Build an artifact the room can inspect

TEAM TASK

Design a release-review workflow with dependencies, retries, and a human gate.

1

Mark parallel work

2

Define join guard

3

Place decision point

Suggested timing: 5 min brief • 20 min work • 10 min critique • 5 min repair

Turn the contract into executable prompt behavior

Draft an orchestration prompt that routes work but never creates findings.

01

Select

02

Dispatch

03

Track

04

Validate

05

Route

06

Never assess domain

Draw a safe fan-out/fan-in graph and write its join guard.

Answer with evidence. Name the contract, state, or authority boundary you used.
